MB-K300s is the most versatile listening station around. Its easy installation and state-of-the-art design makes it the perfect fit in any retail setting.

This affordable, high quality 3-Disc Listening Station is smaller than most single CD listening stations at one-third of the cost per CD.

Features	Benefits
Nakamichi is the only company that manufactures listening stations specifically for the commercial market and does not use consumer-modified components.	You are dealing with only one manufacturer who services their product in its entirety with service centres in most major cities throughout the world.
Changer mechanism does not contact the recorded surface of the CD.	Repeated disc changes will not damage the disc
Programmable First Track - allows you to program any title song on each CD as the default track.	Create instant artist recognition with your customers and increase the impulse to buy. Hit songs are what sell CDs.
Informative Play Counter - provides a digital readout of how many times a specific CD has been accessed.	Assists your staff with inventory management, allowing them to be better informed about product selection and marketing.
Auto Standby Function - station switches to standby mode when there is no key input for about five minutes.	Protects the laser pickup from unnecessary wear.

dbi Pro 705 Headphones

Specially Designed - delivering uncompromising sound quality while maintaining a rugged construction to handle the constant wear and tear from hundreds of users daily.

Extremely Durable - featuring a steel armoured cable (rubber-coated), a reinforced covered steel headband and replaceable ear-pads.

Quality Components - copper plated aluminum voice coil and a very light diaphragm produce an incredibly low tight bass together with warm high frequencies.
